Abstract of the Talk

We all know that password is the most basic and most popular approach towards securing our devices and applications. Can using passwords alone make us secure? In the current evolving cyber threat scenarios in a world where Zero day threats are becoming the new reality, having even a strong password is not adequate. So what are various authentication technologies available to secure our IT Infrastructure? “Passwordless Authentication” is a new buzz in this arena. This webinar is aimed to discuss its all round perspective.

All are welcome:

Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
