Abstract of the Talk	Neurotechnology refers to a field of technology that involves the application of principles and techniques from neuroscience to develop technologies that interact with or manipulate the nervous system. It encompasses a wide range of devices, tools, and techniques that interface with the brain or nervous system for various purposes, including medical, research, and consumer applications. Neurotechnology is enabling efforts towards human and brain augmentation. The webinar will discuss its all-round perspective including the real-time issues and challenges.

All are welcome:
Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
